Gas Pipeline Rehabilitation using NordiTube Technologies

NordiTube TUBETEX G HYTREL liner consists of a woven textile liner, having on one side an **HYTREL coating**, which is the new inner pipe surface. Using a special epoxy resin system, the uncoated face of **TUBETEX G HYTREL** is entirely bonded to host pipe. **TUBETEX G HYTREL** is an adhesive-backed hose renovation technique. It is an interactive system relying on the bonding with the host pipe and is classified as “**Class C**” according to **ISO 11295**.

Advantages of using NordiTube Liner for rehabilitation of Pipeline:

- Liners are under used for more than **30 years** for **hundreds of Kms**
- **TUBETEX G HYTREL** tested & certified by **DVGW GW 327; DVGW 270; W330; VP 404; DIN 30658-1; KTW-BWGL; ACS** & other industrial approvals.
- Used by **Mosgaz, Russia; GASAG, Germany; RAG, Austria** & many more.
- **TUBETEX G HYTREL** available from **DN 150 to DN 1000 mm**
- Liner is suitable **up to 30 BAR** & single length up to **600 meters**.
- Liners installed with well proven **inversion process** with **Steam curing**.
- **Seamless liner** with **even wall thickness** coating thickness of 1 mm & liner thickness of 3.1 mm over the circumference.
- **Lifetime** of pipe extended with improvement of **flow performance**.
- **No** possibilities of further **erosion & corrasion** on ID of the metal pipe.
- Compatible with bends
- **TUBETEX G HYTREL** Liners seals leaking joints and corrosion pits Remains tight in case of stress cracks and displacement & Proven in case of soil movements and vibrations e.g., earthquake
- Used for different host pipes like CI, Steel etc.
- Liner impregnated under perfect vacuum condition achieve uniform resin saturation & liner are shipped from the factory in refrigerated container.
- Proven in case of **soil movements and vibrations**, e.g., **earthquake**
